

## Hargreaves Lansdown

Build an iOS app that performs the following three functions:

- Displays the @Hlinvest twitter feed and the Profile (Name, twitter handle & location etc.)
- The app should contain two elements (the feed and the profile), in portrait view the profile should be on top of the feed, which should scroll to show older feeds. In landscape view the profile should be to the right of the screen with the feed again scrollable in the left hand side.
- The feed data should update once per minute.

**N.B.:** The application should be laid out using auto layout rather than the struts/springs model.
